

Morphs: A **Morphology-Driven** Adventure **Transforming** **Primary Spelling** Practice

Morphs combines engaging gameplay with research-led spelling and morphology practice, helping pupils strengthen word knowledge, retention, and confidence. Fully included within a Grammarsaurus subscription, Morphs is accessible to both schools and solo subscribers, providing high-impact learning at an affordable price. By transforming spelling into a fun, interactive experience, Morphs supports teachers, motivates pupils, and enhances everyday classroom practice through a versatile digital tool.

The innovative nature of the resource

Morphs is an innovative spelling game that transforms morphology learning into an immersive adventure. Pupils become miniature, ant-sized explorers living within a tiny colony, journeying through imaginative landscapes designed to captivate and motivate young learners. Each environment contains a series of interactive challenges precisely aligned with year-group spelling objectives and morphology content.

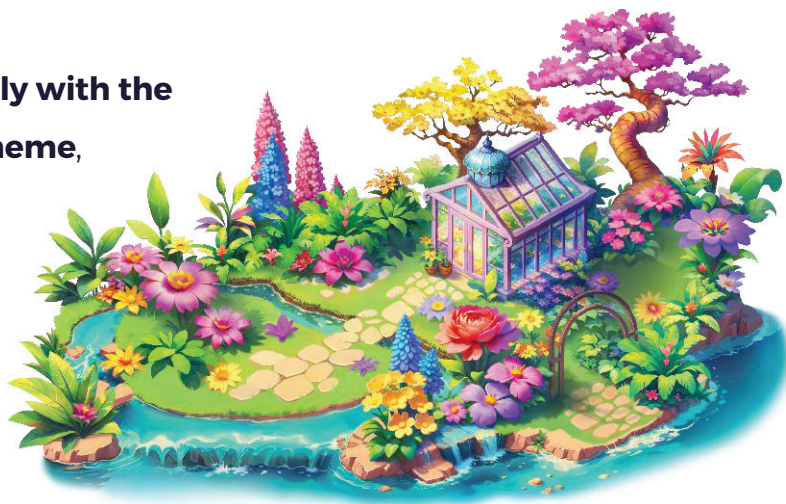

Innovation is embedded throughout the design: every level blends gameplay with deep linguistic understanding. Children learn through action – identifying morphemes, spelling morphemes and exploring word structures as they navigate the game world. Each level culminates in a “boss” encounter where pupils use a laser to deter an insect predator, reinforcing key learning while adding excitement and a purposeful challenge.

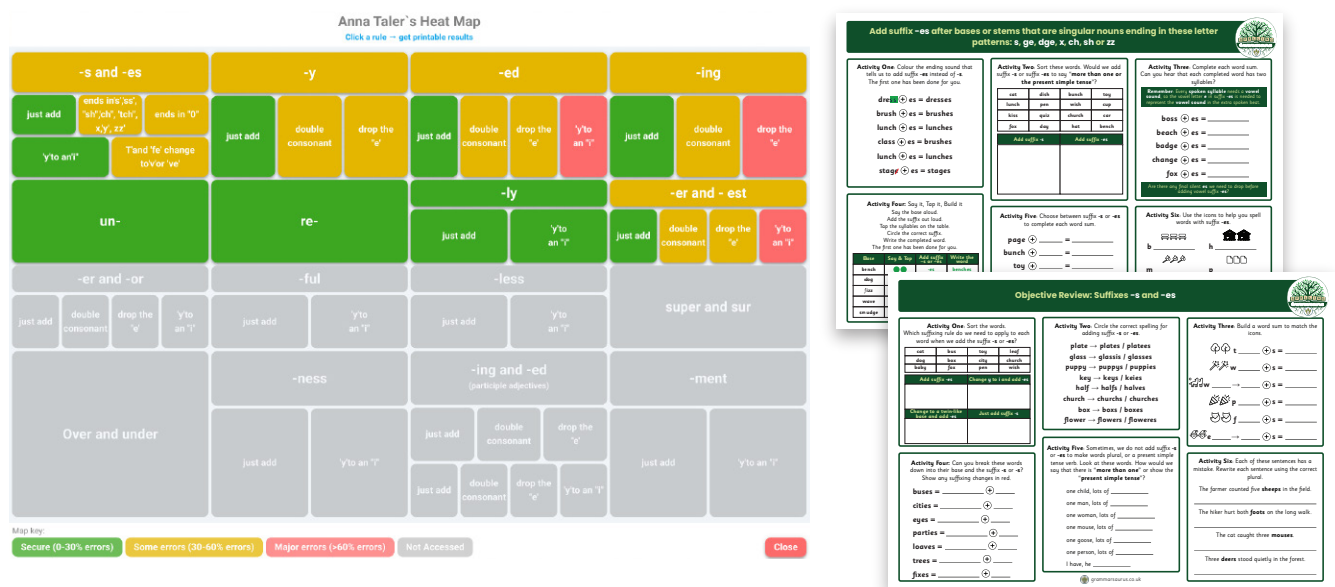

What makes Morphs stand out is its seamless combination of curriculum alignment, playful learning and meaningful engagement. Rather than relying on rote memorisation, the game embeds morphology and spelling within an exciting narrative that promotes problem-solving, exploration and discovery. Pupils are not simply playing, they are mastering fundamental spelling concepts in a way that feels natural, motivating and memorable.

Morphs is designed to **align directly with the Spelling with Grammarsaurus scheme,**

reinforcing the same systematic, morphemic approach used in the classroom. Learning is explicit, structured and cumulative, helping spelling make sense for all learners.

Every response feeds into a unique **spelling heatmap**, clearly identifying gaps in a child’s knowledge and linking directly to targeted support materials. This makes Morphs a powerful assessment and intervention tool, particularly effective for children with SEND, especially specific literacy difficulties.

Morphs represents a fresh, research-aligned approach to digital spelling practice, proving that rigour and enjoyment can coexist.

The impact on learning and the work of the teacher in the classroom

Morphs has a strong and immediate impact on both pupil learning and classroom practice, deepening understanding of spelling and morphology across the school.

Impact on pupil learning

Morphs improves spelling accuracy and confidence by helping children understand how words work. Through fast-paced, meaningful gameplay, pupils repeatedly apply morphemes in ways that support long-term retention.

This approach particularly benefits pupils who find traditional phonics-only methods challenging, giving them a logical and engaging way into complex spellings.

The game's immersive narrative motivates children to practise more often, and teachers frequently note increased enthusiasm, better recall and noticeable improvements in written work.

Impact on classroom practice

Morphs reduces teacher workload by providing high-quality, ready-made practice, mapped directly to curriculum objectives. Teachers no longer need to create additional worksheets, retrieval tasks or intervention resources - Morphs provides them instantly. Morphs advanced heatmap provides analysis of spelling errors for each pupil, reducing teacher workload by providing accurate assessment with 'pick up and go' resources to use as an intervention. It aligns with the Spelling with Grammarsaurus objectives, serving as a complementary aid to support teaching and learning, ensuring teachers have even more tools at their disposal to support their pupils. Morphs also strengthens teacher subject knowledge, as all content is accurate, structured and research informed.

Whole-school impact

Morphs supports consistent, frequent retrieval that reinforces learning taught in the Spelling with Grammarsaurus scheme. Whether used in lessons, transition time or at home, it helps close gaps, encourages independent practice and ensures regular revisiting of key spelling content.

In short, Morphs boosts progress, reduces workload and raises the standard of spelling provision across the school.

How the resource supports or enhances the everyday life or work of teachers, pupils or schools

Morphs integrates effortlessly into daily teaching, providing a curriculum-aligned, interactive tool for high-quality spelling and morphology practice. Each mini-game links directly to year-group objectives, saving teachers valuable planning time and reducing the need for additional activities or intervention materials. Its flexibility means it can be used during lessons, as a starter or plenary, in transition moments or as homework.

For pupils, Morphs turns spelling into an adventure they want to return to. As tiny explorers navigating different environments, children feel motivated and invested in their progress. The morphology-rich tasks and exciting boss battles build confidence, deepen understanding and encourage regular, purposeful practice.

For schools, Morphs supports whole-school consistency and complements the Spelling with Grammarsaurus scheme. By offering accessible practice at both home and school, it ensures continuity of learning and strengthens long-term retention.

Cost-effectiveness in terms of educational aims and results

Morphs provides exceptional value for money because it is **included at no additional cost** within every Grammarsaurus subscription. Solo subscriptions start at **£57.99 + VAT**, and school subscriptions begin at **£175 + VAT**, allowing teachers, small schools and large settings alike to access the game affordably.

Its cost-effectiveness stems from its unlimited use: pupils can play as often as needed - during lessons, interventions or during transitions - without per-child or per-session fees. This ensures schools gain maximum educational value from a single subscription while giving pupils regular opportunities to reinforce spelling and morphology learning.

Morphs directly supports Grammarsaurus' educational aims by helping children understand word structure, build spelling confidence and retain knowledge through meaningful, play-based practice. Because it delivers substantial learning impact at zero additional cost, Morphs represents an exceptionally efficient and budget-friendly way for schools to strengthen spelling outcomes across the curriculum.
